

Guideline of a Block Trade

-ver. 1.0-

Update: 22nd February 2016

Yangon Stock Exchange Joint-Venture Co., Ltd.

Principle of a block trade

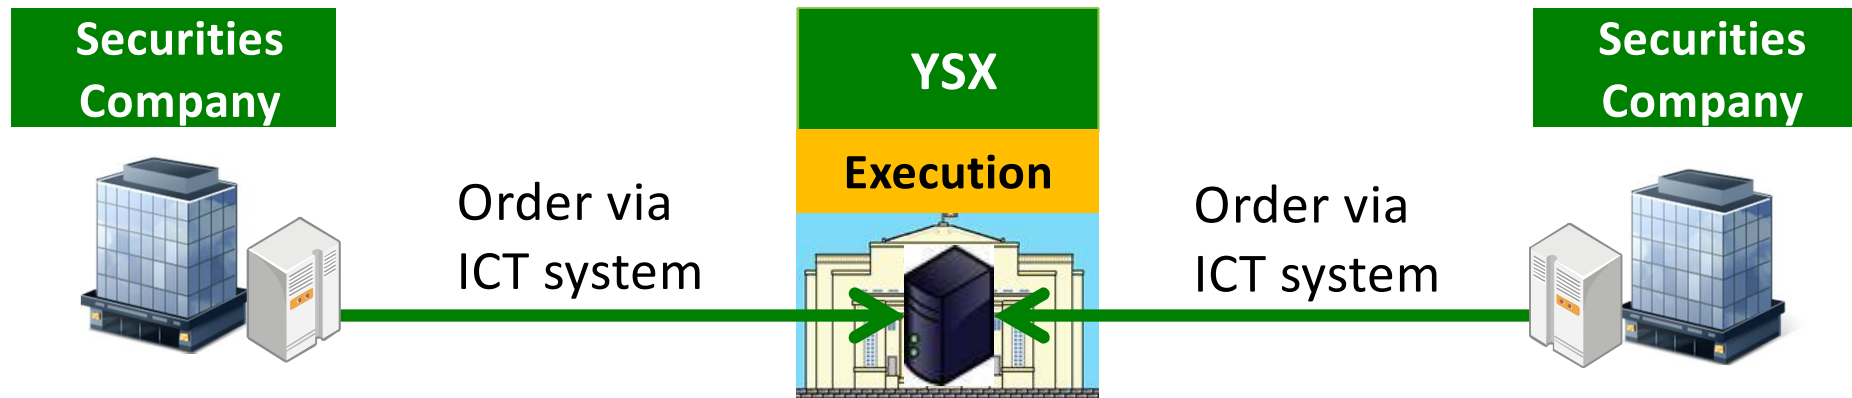

- A block trade is a transaction exceeding 10,000 shares, defined by YSX, and the trade is executed at YSX apart from the auction trade.
- Buyers and sellers of a large amount of shares, in general, privately negotiate with the terms and conditions prior to sending a block trade application to a stock exchange.
- Investors choose a block trade for avoiding a big market impact through sending the large order to an auction trade of a stock exchange.
- A block trade is able to be conducted between same or two different securities companies.
- Execution price of a block trade should not be, as defined by YSX, far different from the latest market price.

Difference from an auction trade

● Auction trade

- An order is sent via communication line and executed in a method of an auction trade conducted by YSX's trading system.

● Block trade

- A order is sent by FAX and executed manually outside of an auction trade.

Block trade rules
